

Tamper Resistant Nut Installation

For Square Taper Nut Installation

SQUARE
TAPER

Instructions

Step 1

Attach your sign onto a post with a bolt that penetrates the sign at least 5/8 inches deep.

Step 2

Take one Square Taper Nut and twist the nut onto the bolt by hand with the wider side facing the sign. Tighten as tight as you can by hand.

Step 3

Take a second Square Taper Nut and twist the nut onto the bolt by hand with the opposite (smaller) side facing the sign. Tighten as tight as you can by hand and line up the edges of the second nut to the first nut.

Step 4

Use an adjustable or socket wrench between the two nuts (where both of the smaller sides meet) and tighten nut closest to the sign until the nut is firmly in place, but not too tight.

Step 5

Use the adjustable or socket wrench to remove the outermost nut completely off the bolt. Store for future use (required for removal of the nut).

Step 6

Repeat Steps 1 to 5 for all other bolt locations.
